1 Question No. 2.17

Find the perpendicular distance of the following lines from the origin and angle between the perpendicular and positive x-axis.

a.
$$(1 - \sqrt{3})\mathbf{x} = -8$$

b. $(0 \ 1)\mathbf{x} = 2$
c. $(1 \ -1)\mathbf{x} = 4$

2 Solution

1) All the given data can be tabularised in table 2.1:

	Line1	Line2	Line3
c_1, c_2, c_3	8	2	4
$\mathbf{n}_1,\mathbf{n}_2,\mathbf{n}_3$	$\begin{pmatrix} 1 \\ -\sqrt{3} \end{pmatrix}$	$\begin{pmatrix} 0 \\ 1 \end{pmatrix}$	$\begin{pmatrix} 1 \\ -1 \end{pmatrix}$

TABLE 2.1: Given Data

- 2) For finding the perpendicular distance of lines from origin:
 - Let a point $\mathbf{A} = \begin{pmatrix} x_1 \\ y_1 \end{pmatrix}$.
 - The perpendicular distance of a point **A** from a line ax+by+c=0 is given by:-

$$d = \frac{|a(x_1) + b(y_1) + c|}{\|\mathbf{n}\|}$$
 (2.0.1)

where,
$$\mathbf{n} = \begin{pmatrix} a \\ b \end{pmatrix}$$
 (2.0.2)

• If the point is $\mathbf{O} = \begin{pmatrix} 0 \\ 0 \end{pmatrix}$, then

$$d = \frac{|a(0) + b(0) + c|}{\|\mathbf{n}\|}$$
 (2.0.3)

$$d = \frac{|c|}{||\mathbf{n}||} \tag{2.0.4}$$

- 3) For finding angle between the perpendicular and positive x-axis:-
 - We have:

$$ax + by + c = 0$$
 (2.0.5)

$$by = -ax - c \tag{2.0.6}$$

$$y = \frac{-a}{b} - \frac{c}{b}$$
 (2.0.7)

• So,the slope,m₁ can be written as:

$$m_1 = \frac{-a}{h} (2.0.8)$$

• Let slope of the perpendicular line = m_p,then we know that:

$$m_{\rm l} \times m_{\rm p} = -1 \tag{2.0.9}$$

$$m_{\rm p} = \frac{-1}{m_{\rm l}} \tag{2.0.10}$$

• Using (2.0.8) in above equation we get:

$$m_{\rm p} = \frac{b}{a} \tag{2.0.11}$$

$$m_{\rm p} = \tan \theta \tag{2.0.12}$$

$$\theta = \tan^{-1}(m_{\rm p})$$
 (2.0.13)

- 4) For line, $(1 \sqrt{3})x = -8$
 - We have:

$$c_1 = 8, \mathbf{n}_1 = \begin{pmatrix} 1 \\ -\sqrt{3} \end{pmatrix}$$
 (2.0.14)

• Using (2.0.4) we get:

$$d_1 = \frac{|c_1|}{\|\mathbf{n}_1\|} \tag{2.0.15}$$

$$d_1 = \frac{8}{\sqrt{1+3}} \tag{2.0.16}$$

$$d_1 = \frac{8}{2} = 4 \text{ units} ag{2.0.17}$$

• Using (2.0.11)the slope of the line perpendicular to given line is:

$$m_{\rm p1} = \frac{b}{a} \tag{2.0.18}$$

$$m_{\rm p1} = \frac{-\sqrt{3}}{1} = -\sqrt{3} \tag{2.0.19}$$

• Also, Using (2.0.13) the angle between Perpendicular and Positive x-axis is:

$$\theta_1 = \tan^{-1}(m_2) \tag{2.0.20}$$

$$\theta_1 = \tan^{-1}(-\sqrt{3})(\because m_2 = -\sqrt{3})$$
 (2.0.21)

$$\theta_1 = -60^{\circ} \tag{2.0.22}$$

- 5) For line, $(0 \ 1) \mathbf{x} = 2$
 - We have:

$$c_2 = 2, \mathbf{n}_2 = \begin{pmatrix} 0 \\ 1 \end{pmatrix}$$
 (2.0.23)

• Using (2.0.4) we get:

$$d_2 = \frac{|c_2|}{\|\mathbf{n}_2\|} \tag{2.0.24}$$

$$d_2 = \frac{2}{\sqrt{1}} \tag{2.0.25}$$

$$d_2 = 2 \text{ units}$$
 (2.0.26)

• Using (2.0.11), the slope of the line perpendicular to given line is:

$$m_{\rm p2} = \frac{b}{a} \qquad (2.0.27)$$

But as
$$a = 0 \implies m_{p2} = \infty$$
 (2.0.28)

• The angle between Perpendicular and Positive x-axis is:

$$\implies \theta_2 = \tan^{-1}(\infty) \tag{2.0.29}$$

$$\implies \theta_2 = 90^{\circ} \tag{2.0.30}$$

6) For line, (1 -1)x = 4

• We have:

$$c_3 = 4, \mathbf{n}_3 = \begin{pmatrix} 1 \\ -1 \end{pmatrix}$$
 (2.0.31)

• Using (2.0.4) we get:

$$d_3 = \frac{|c_3|}{\|\mathbf{n}_3\|} \tag{2.0.32}$$

$$d_3 = \frac{4}{\sqrt{1+1}} \tag{2.0.33}$$

$$d_3 = \frac{4}{\sqrt{2}} \tag{2.0.34}$$

$$d_3 = \frac{4}{1.41} \tag{2.0.35}$$

$$d_3 = 2.828 \text{ units}$$
 (2.0.36)

• Using (2.0.11) the slope of the line perpendicular to given line is:

$$m_{\rm p3} = \frac{b}{a} \tag{2.0.37}$$

$$m_{\rm p3} = \frac{1}{-1} \tag{2.0.38}$$

$$m_{\rm p3} = -1$$
 (2.0.39)

• Also, Using (2.0.13) the angle between perpendicular and positive x-axis is:

$$\theta_3 = \tan^{-1}(m_2) \tag{2.0.40}$$

$$\theta_3 = \tan^{-1}(-1)(\because m_2 = -1)$$
 (2.0.41)

$$\theta_3 = -45^{\circ} \tag{2.0.42}$$

7) If, $\mathbf{d_n}$ =Perpendicular distance of line from origin

 m_{pn} =Slope of the perpendicular to the line

 θ_n = Angle of perpendicular with positive x-axis.

8) All the calculated data can be tabularised in table 2.2:

	Line1	Line2	Line3
d_1, d_2, d_3	4	2	2.828
m_{p1}, m_{p2}, m_{p3}	$-\sqrt{3}$	∞	-1
$\theta_1, \theta_2, \theta_3$	−60°	90°	-45°

TABLE 2.2: Calculated Data

a. Plot of Line1:-

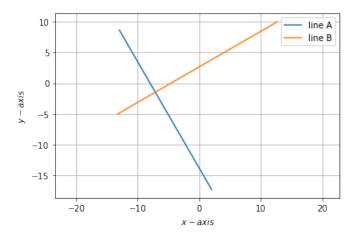

Fig. 2.1: Line1 and it's perpendicular

b. Plot of Line2:-

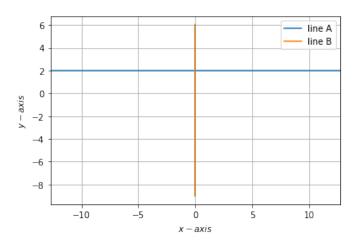

Fig. 2.2: Line2 and it's perpendicular

c. Plot of Line3:-

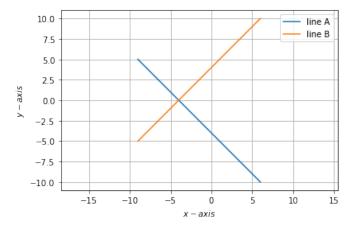

Fig. 2.3: Line3 and it's perpendicular
